PROFESSIONAL SUMMARY

Software Engineering student at Umm Al-Qura University (GPA 3.88/4.00) with an Artificial Intelligence specialisation at KAUST Academy. Experienced in machine learning, full-stack development, requirements engineering and project coordination, with a focus on building reliable, deployable software and AI solutions.

EDUCATION

Umm Al-Qura University — BSc Software Engineering 2023 – Expected 2027
Makkah, Saudi Arabia GPA: 3.88/4.00

- Coursework and academic projects in requirements engineering, software testing, system analysis, algorithms and data structures.

KAUST Academy — Artificial Intelligence Specialisation 2025 – 2026

- Advanced to the final Summer Programme, ranking among the top 100 students selected from more than 14,000 applicants.
- Studied machine learning, deep learning, computer vision, CNN architectures, RNNs, attention, transformers and Edge AI.

SELECTED PROJECTS

ESAS — Experience Saudi As a Saudi | Graduation Project, Umm Al-Qura University 2025 – 2026

- Coordinated the project team through brainstorming, planning and requirements gathering, converting an initial concept into a structured engineering project.
- Documented software requirements, system workflows, use cases and system diagrams, and produced the Software Requirements Specification (SRS).
- Implemented backend and frontend features for catalogue browsing, role-based user flows, provider and administrator workflows and booking; presented the poster and live demo at the INJAZ 2026 Graduation Projects Exhibition.

OnKith — Privacy-Aware Edge AI | Team Project, KAUST Academy 2026

- Developed and trained a compact TinyBERT-4 token-classification model that detects and masks personally identifiable and sensitive spoken content before it reaches cloud-based AI services.
- Optimised the model through INT8 quantisation for lightweight edge inference, achieving an F1 score of approximately 0.95 with precision and recall assessed; investigated pruning and knowledge distillation as further compression options.
- Prepared the model, tokeniser, label mappings, configuration and inference artefacts for Raspberry Pi 5 (4 GB RAM) deployment, agreeing the inference workflow and integration requirements with the deployment team under latency, memory and model-size constraints.

Personal Dashboard | Independent Project 2026

- Built and deployed a bilingual English/Arabic dashboard using React, TypeScript, Vite and Tailwind CSS, with responsive design, light and dark modes and localised content.
- Implemented CV viewing and downloading, LinkedIn embeds and social preview metadata, and structured reusable content files and a GitHub Pages workflow to simplify future updates.

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, HTML, CSS.

Frontend: React, Vite, Tailwind CSS, responsive design.

AI and Machine Learning: PyTorch, deep learning, computer vision, CNNs, RNNs, transformers, token classification, model training, data preprocessing, evaluation, INT8 quantisation, model compression, Edge AI.

Software Engineering: object-oriented programming, requirements engineering, SRS, system design, software architecture, testing, technical documentation, project coordination.

Tools: Git, GitHub, GitHub Pages, Docker, VS Code, Codex.

CERTIFICATIONS

Advanced Artificial Intelligence, KAUST Academy • Fundamentals of Deep Learning, NVIDIA • Convolutional Neural Networks, DeepLearning.AI • Linear Algebra for Machine Learning and Data Science, DeepLearning.AI • Introduction to Data Science in Python, University of Michigan.

LANGUAGES

Arabic: Native. • **English:** Professional Proficiency (IELTS Academic 8.0, CEFR C1).
