PROFESSIONAL SUMMARY

Software Engineering student at Umm Al-Qura University (GPA 3.89/4.00) and a KAUST Academy AI intern, selected among the top 100 students from more than 14,000 applicants. Owned the privacy model of an on-device AI system end to end, from dataset and label design through INT8 quantisation to measured deployment on a Raspberry Pi 5, and placed third in two KAUST Academy machine learning competitions. Coordinates a six-person graduation project and owns its documentation and repository.

EXPERIENCE

KAUST Academy, AI Intern

Jun 2026 to Aug 2026

Capstone project: *OnKith, on-device privacy filtering for a voice assistant*

King Khalid University, Abha

- Model-side developer on an eight-week AI Specialisation internship, owning dataset selection, label design, training, evaluation, optimisation and deployment packaging for the privacy model.
- Moved the baseline from binary classification to token-level PII masking and fine-tuned TinyBERT (4L-312D) on 147,366 English rows of OpenPII 1.5M, reaching 0.973 token-level micro-F1 and 0.957 entity-level F1 on a 40,908-row held-out split at a private-character leakage rate of 0.003.
- Exported to ONNX and quantised to INT8, cutting the artefact from 54.5 MB to 13.7 MB for 0.3 points of token F1, then packaged the deployment artefacts and defined the inference contract with the Raspberry Pi integration team.
- Re-evaluated the deployed model, identified dataset imbalance and rare-label weakness, and replaced it with DeBERTa-v3-xsmall over 31 privacy entities, raising out-of-distribution typed F1 from 0.46 to 0.62 and private-character recall from 0.32 to 0.84.
- Traced an apparent quantisation collapse to a SentencePiece decoding defect in the production path, corrected the token grouping under regression tests, and benchmarked the final INT8 system on Raspberry Pi 5 at 0.945 typed F1 and 53 ms median latency.

KAUST Academy, Kaggle Competitor

Jul 2026 to Aug 2026

- Competed in KAUST Academy Kaggle challenges spanning image classification, image generation and inpainting, instance segmentation, natural language and audio tasks.
- **Cell instance segmentation, third of 24 teams.** Segmented neuronal cells in fluorescence microscopy with a ConvNeXt-Tiny U-Net regressing a normalised distance map, decoded by marker-controlled watershed: 0.8144 instance F1 on a near-duplicate-aware grouped split and 0.5472 private instance F1, above the previous year's winning solution.
- **Image inpainting, third place.** Built an end-to-end MI-GAN pipeline with YuNet face filtering and test-matched dynamic masking, reconstructing all 8,000 test images for a final private-leaderboard FID of 12.02.

PROJECTS

ESAS, Experience Saudi As a Saudi | Graduation Project, Umm Al-Qura University

Aug 2025 to Aug 2026

- Coordinated a six-person team from brainstorming through planning and requirements gathering, converting an initial concept into a structured engineering project.
- Owned the repository and the documentation set: Software Requirements Specification, system workflows, use cases and diagrams, project reports and the exhibition poster, reviewing team contributions before merge.
- Implemented backend and frontend features for catalogue browsing, role-based access, booking, and provider and administrator dashboards; presented the poster and live demo at INJAZ 2026.

EDUCATION

Umm Al-Qura University, BSc Software Engineering

Aug 2023 to Jun 2027 (expected)

Makkah, Saudi Arabia

GPA: 3.89/4.00

- **Relevant coursework:** requirements engineering, software testing, system analysis, algorithms and data structures.

KAUST Academy, Artificial Intelligence Specialisation

Nov 2025 to Aug 2026

- Selected among the top 100 students from more than 14,000 applicants; advanced through every stage to the final Summer Programme, an eight-week specialisation in computer vision, reinforcement learning and natural language processing.

TECHNICAL SKILLS

Software Engineering: object-oriented programming, requirements engineering, SRS, system design, software architecture, testing, technical documentation, project coordination.

Languages: Python, Java, TypeScript, HTML, CSS.

AI and Machine Learning: PyTorch, Hugging Face Transformers, ONNX Runtime, TensorFlow Lite, OpenCV, Gymnasium, NumPy, deep learning, computer vision, generative models, NLP, large language models, reinforcement learning, INT8 quantisation, Edge AI.

Frontend and Tools: React, Vite, Tailwind CSS, Git, GitHub, GitHub Pages, Docker, VS Code.

CERTIFICATIONS AND LANGUAGES

Certifications: Advanced Artificial Intelligence (KAUST Academy) • Fundamentals of Deep Learning (NVIDIA) • Convolutional Neural Networks, and Linear Algebra for ML and Data Science (DeepLearning.AI) • Introduction to Data Science in Python (Univ. of Michigan).

Languages: Arabic, native. • English, professional proficiency (IELTS Academic 8.0, CEFR C1).
